

README - Random User Directory

Objective

Develop a responsive web application that fetches and displays user information from a public API using JavaScript Fetch API.

Features

- Fetches 20 random users from the Random User API.
- Displays profile picture, name, email, phone number, and country.
- Search users by name.
- Reload button to fetch a new set of users.
- Loading indicator while fetching data.
- Error handling for failed API requests.
- Responsive card layout.

Technologies Used

HTML5
CSS3
JavaScript (ES6)
Fetch API

API Used

<https://randomuser.me/api/>

Folder Structure

Frontend_Internship_Project_Task-3/

■■■ index.html

■■■ style.css

■■■ script.js

■■■ README.md

■■■ Screenshots/

How to Run

1. Open the project folder in VS Code.
2. Open **index.html** using the Live Server extension.
3. The application will open in your browser.
4. Search users and reload data using the provided features.

Learning Outcomes

- Working with REST APIs
- JavaScript Fetch API
- Async/Await
- DOM Manipulation
- Responsive Web Design
- Error Handling
